

AUGUSTO CAPELLO

He's an independent researcher in the physics of ions and quantum mechanics.
Over time, he carried out research for various companies

ENGINEERING SECTOR

- **Aeritalia:** fighter aircraft group, safety and security of power reactors from thermal stress.
- **ESA /FIAT AVIO:** modifications of the surface structure on bearings of the cryogenic turbopump Ariane 5.
- **CCR Euratom:** protective barriers from neutrons
- Parts of motors subject to multistress: engines for motor sports.

BIOMEDICAL INDUSTRY

- Biocompatibles devices for plants like hip replacement, stents, catheters.

BIOGLASS SECTOR

GRUPPO DI STUDI BIOVETRI: isomorphism in the jump of state to transfer the proprieties of a solid on an other incompatible solid , with beam of electrons and particle acceleration.

All the above experiences are verifiable in relation to the industrial consent.

In the field of theoretical research he presented:

- **Quanta are all siamese:** A new model for hybrid symmetry between quantum integrated field and mathematical domain.
The scientific principle behind the Checkatom Identimetric.
- **Checkatom Identimetric:** in relation to the indeterminability of the quantum field si also formalised a Protocol/device that assigns unique and incloneable identities.
- **Q.E.G. QuantumEnergy & Geometry:** definition of a new constant π -grecale associated with models of energetic expansion.
- Unification of fundamental fields of matter: hypothesis called **Terموquanto**.
- **KAPP Krypton Analisis Polimolecular Profile:** symmetry vacuum-matter, a new concept to scan modified cells.
- L' **Icona controversa:** a neutral hypothesis about this artifact.
